

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	18 July 2026
Team ID	
Project Name	Visualization Tool for Electric Vehicle Charge and Range Analysis
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

The team discussed various challenges in the electric vehicle domain and identified the need for better understanding of EV specifications, charging infrastructure, vehicle range, and pricing information.

During the brainstorming session, different ideas related to electric vehicles were explored. After analyzing the feasibility and importance of each idea, the team selected the problem of developing a Visualization Tool for Electric Vehicle Charge and Range Analysis.

Selected Problem Statement:

"Electric vehicle users and stakeholders face difficulties in comparing EV models based on their range, charging availability, price, and technical specifications. This project aims to develop a visualization tool that analyzes electric vehicle data and provides meaningful insights through interactive dashboards to support better decision-making."

Step-2: Brainstorm, Idea Listing and Grouping

During the brainstorming process, various ideas related to electric vehicle data analysis were identified and grouped into different categories. The ideas focused on improving understanding of EV performance, pricing, and charging infrastructure.

Idea	Category
Analyze EV driving range and battery performance	Vehicle Performance Analysis
Compare EV prices across different models and brands	Price Analysis
Analyze availability of EV charging stations	Charging Infrastructure Analysis
Compare EV brands and models based on specifications	Brand and Model Comparison
Study EV features such as speed, efficiency, and powertrain	Feature Analysis
Visualize EV data using interactive dashboards	Data Visualization

These ideas helped in defining the scope of the project and selecting the most useful features for the final visualization tool.

Step-3: Idea Prioritization

After evaluating the brainstormed ideas based on importance, feasibility, and usefulness, the ideas were prioritized to identify the key features required for the project.

Idea	Impact	Feasibility	Priority
EV range analysis and comparison	High	High	1
EV charging station analysis	High	Medium	2
EV price comparison	Medium	High	3
EV brand and model comparison	Medium	High	4
EV feature analysis	Medium	Medium	5
Interactive data visualization dashboard	High	High	6

Final Selected Idea:

The team selected the development of a Visualization Tool for Electric Vehicle Charge and Range Analysis because it provides valuable insights into EV performance, charging infrastructure, and vehicle comparisons through data visualization.
