

Project Design Phase
Proposed Solution

Date	18 July 2026
Team ID	
Project Name	Visualization Tool for Electric Vehicle Charge and Range Analysis
Maximum Marks	2 Marks

Proposed Solution :

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	EV users, analysts, and stakeholders face difficulty in analyzing large amounts of electric vehicle data because it is scattered across multiple datasets. This makes comparison and decision-making time-consuming.
2.	Idea / Solution description	Develop a Visualization Tool for Electric Vehicle Charge and Range Analysis that stores EV datasets in a MySQL database, performs SQL operations, and presents interactive dashboards in Tableau for analyzing EV range, charging stations, efficiency, pricing, and other key insights.
3.	Novelty / Uniqueness	Integrates multiple EV datasets into a single platform with interactive visualizations, enabling easy comparison of EV models and charging infrastructure through an intuitive dashboard.
4.	Social Impact / Customer Satisfaction	Helps users make informed decisions about electric vehicles, promotes awareness of sustainable transportation, supports EV adoption, and provides quick access to reliable insights.
5.	Business Model (Revenue Model)	Freemium model with free dashboard access and premium analytical features for automobile companies, researchers, and EV businesses. Enterprise licensing and customized reporting services can generate additional revenue.
6.	Scalability of the Solution	The solution can easily scale by adding new EV datasets, integrating real-time data sources, supporting cloud deployment, and expanding to include predictive analytics and additional visualization features.
