Customer: EV Industry Analyst / Stakeholder

Customer Journey Map

Visualization Tool for Electric Vehicle Charge and Range Analysis

	Awareness Recognize the need for EV insights	Data Collection Gather EV data and information	Data Analysis Analyze and compare EV data	Decision Making Make data-driven decisions	Feedback / Improvement Review insights and improve
Steps What does the customer do?	• Recognizes the need for EV related data • Searches for reliable information on EVs, range, charging stations, prices, etc.	• Collects EV datasets from various sources • Gathers information on models, range, charging infra, prices, features	• Uploads / accesses data in the tool • Uses visualizations and filters to analyze and compare EVs	• Interprets insights from dashboards and charts • Compares options and identifies the best fit	• Reviews insights periodically • Provides feedback and monitors updates for better decision making
Interactions What actions do they take?	• Searches online for EV data • Reads reports, articles, and blogs	• Downloads datasets or connects to sources • Inputs or imports data into the tool	• Uses filters, charts, maps, and tables • Compares range, price, charging stations, brands	• Uses dashboards and insights • Exports reports or shares findings	• Gives feedback on data accuracy and features • Suggests improvements
Goals & Motivations What do they want to achieve?	• Understand EV market trends • Find accurate and reliable data source	• Gather complete and accurate EV information • Ensure data is up-to-date	• Analyze EV performance, range, and pricing • Identify trends and patterns	• Make informed choices for investments or recommendations • Save time in analysis	• Improve decision accuracy • Stay updated with new EV data and insights
Positive Moments What goes well?	• Finds useful EV information • Discovers the tool	• Easy data upload or connection • Access to large EV datasets	• Interactive visualizations • Clear and easy comparisons	• Quick insights • Data-driven confidence in decisions	• Regular updates • Improved tool features based on feedback
Negative Moments What challenges do they face?	• Information is scattered • Hard to find reliable sources	• Data in different formats • Time-consuming manual collection	• Raw data is hard to understand • Complex analysis without tools	• Lack of clear insights • Difficulty in comparing multiple EVs manually	• Outdated or incomplete data • Limited features in some tools

This journey map represents the experience of an EV Industry Analyst / Stakeholder using the Visualization Tool for Electric Vehicle Charge and Range Analysis.
