

Project Design Phase
Problem – Solution Fit Template

Date	18 July 2026
Team ID	
Project Name	Visualization Tool for Electric Vehicle and Range Analysis
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Problem-Solution fit canvas 2.0

Purpose / Vision : To help EV buyers, researchers and decision makers easily access, analyze and visualize reliable EV data for informed decisions.

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Who is your customer? i.e. existing (market of 5 y) + new - EV Buyers / Prospective Buyers - EV Researchers & Students - Automotive Industry Analysts - Government & Policy Makers - Fleet Operators & Businesses - Environmental Enthusiasts	6. CUSTOMER CONSTRAINTS CC What underlying problems or constraints (from taking action or time their choices of customer) i.e. spending more budget for each interim sometime, available solution - Data is scattered in multiple sources - Hard to compare EV models - No single platform for range, price and charging info - Complex data, difficult to interpret - Time consuming manual analysis - Lack of interactive visual insights	5. AVAILABLE SOLUTIONS AS Which solutions are available in the ecosystem (what don't work well or need to get the job done? What level they tried in the past? What does their experience level? i.e. pro and cons as an alternative to digital enabling - Manufacturer websites (limited info) - EV comparison websites (basic comparison) - Government portals (raw data, not user-friendly) - Spreadsheets & reports (static, hard to analyze) - Existing dashboards (not interactive/complete)	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs-to-be-done (or problems) do I address for your customers? There could be more than one across different state. - Find reliable EV data in one place - Compare EV models on key factors - Analyze EV range and pricing trends - Find charging station availability - Make data-driven purchase / policy decisions	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the true story behind the needs to do with the customer's job to because of the desired target outcome. - Data is not collected and organized properly - Lack of standardization in EV data - No tool designed for easy visualization - Users lack time and technical skills - Existing solutions are not comprehensive	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? What action / mindset does the right state and behaviour out come target act benefits. - Search multiple websites for EV info - Download reports / datasets - Use spreadsheets for comparison - Usk in forums / communities - Delay decision due to unclear data	Focus on BE, tap into FE, differentiate
Identify strong TR & EM	3. TRIGGERS TR What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a new efficient solution in the news. - Rising fuel prices - Government incentives & policies - Environmental concerns - New EV model launches - Recommendations from peers	10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, & on the second, and the one next, as a new idea towards this problem. If you are working on a new business (green field), write the problem and solution that fits within customer limitations, solves a problem and matches customer behaviour. Visualization Tool for Electric Vehicle Charge and Range Analysis - Centralized & clean EV data - Interactive dashboards & visualizations - Compare EVs by range, price, features & more - Charging station analysis by location - Filter, explore and download insights easily		Identify strong CH, extract online& offline of BE
	4. EMOTIONS: BEFORE / AFTER EM How are customers' feelings related to a problem or a job and afterwards? i.e. felt, emotion + condition to come, and is your communication strategy & design. Before: Confused, Overwhelmed, Uncertain, Frustrated •After: Confident, Informed, Satisfied, Empowered, Peace of mind			
		8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE What kind of actions do customers take online? Extract online channels from BE - Search on Google - Visit EV websites & forums - Social media & YouTube - Online communities & reviews - Download datasets from portals		
		8.2 OFFLINE What kind of actions do customers take offline? Extract online & offline CH of BE and use them for customer development - Visit dealerships - Attend auto expos / events - Talk to experts / friends - Read magazines / newspapers
